

Pure Dental

Bringing WNY the latest technology and implant techniques to regain your smile and confidence.

When you step foot in Pure Dental in Williamsville, New York you feel as though you've entered a sanctuary—sunlight, plants, comfortable easy chairs arranged in front of a fire. A smiling face greets you at check-in. It's a unique atmosphere for a dental office and at Pure that's the ultimate goal.

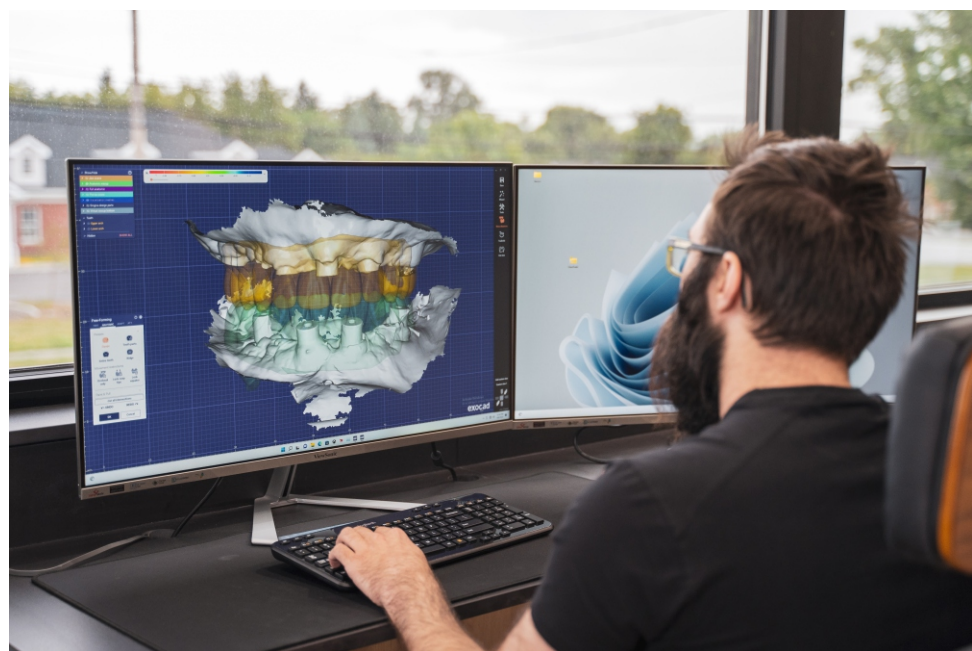

Recently awarded the 2022 ADA Design and Innovation Award, the office is inviting with a spa-like atmosphere. It is clear, however, that the office is technologically advanced; with its own in-house dental lab located upstairs. Pure Dental brings to Buffalo the latest technology and implant techniques to regain your smile and confidence.

Four Ever Smile™, exclusively available at Pure Dental, is a patented fully digital system that is designed to restore your smile. This procedure replaces upper and/or lower teeth with as few as four standard dental implants per arch. These implants are precisely placed and then restored with a digitally designed zirconia bridge. Patients with broken or missing teeth, existing partials, or full dentures can attain a beautiful

new smile in just four hours with the affordable and minimally invasive Four Ever Smile™. Our unique system is competitively priced for the Buffalo market, allowing patients access to an affordable permanent solution for poor and terminal dentition.

The Four Ever Smile™ journey starts as an initial cost-free appointment that includes a CT scan, exam, and full consultation by the doctor. Once the patient feels comfortable and understands the course of treatment, they will then sit with a coordinator to secure their financial plan and complete all surgical paperwork. A 3D scan will be taken for the temporary teeth to be designed from the day of surgery. Surgery is then scheduled and patients can take ease in knowing their long-term oral health and aesthetic goals are top priorities to doctors Elizabeth Michaels and Gregory White.

Drs. Michaels and White are the nucleus of the Pure Dental Team. Along with the caring staff, they combine advanced technology, experience, and a compassionate environment to bring patients a dental experience that is second to none. Dr. Michaels is

a general dentist focused on implant and cosmetic dentistry. Her warm and upbeat personality greets you at your first consultation where she examines the patient's mouth and discusses the treatment options available with Pure. Following surgery, she uses her passion for artistry and a keen eye for cosmetics to restore dental implants and design patients' custom smiles.

Dr. White is a board-certified oral and maxillofacial surgeon, having undergone additional years of intensive training in surgical techniques, anesthesia, implantology, bone and tissue grafting procedures, facial cosmetics, and reconstruction. He has trained with some of the country's leading experts to deliver the best treatment, even in the hardest cases.

Both Drs. Michaels and White believe they can offer patients a better experience and superior care by streamlining the treatment process here at Pure Dental. Because of the digital workflow and on-site dental lab, patients enjoy the benefits of better results at a more affordable cost. Because there are no outside vendors, the patient can expect one bill without additional costs. Our treatment coordinators work with patients to come up with a man-

ageable plan tailored to their individual financial situation.

People considering implants can come to Pure Dental for a free consultation that includes a CAT scan and x-rays. Because of advanced surgical techniques, even patients that have been previously told that they are not good candidates for dental implants can be treated here, all with same-day results and long-term success.

"This is transformative for our patients," says White. Michaels continues, "Patients are often embarrassed by their teeth when they come in, but they leave with higher confidence in themselves and their smiles." That's the Pure Dental promise. We offer a complimentary consultation with the exam, x-rays, and 3D CAT scan. Call (716) 427-0277, or visit foreversmile.com. We are located at 6599 Main Street in Williamsville, NY.
